

Welcome to the Hunter corporate website.

Since my father, William Allan “Al” Hunter, founded this company in 1964 we have introduced dozens of new products and technologies to the global foundry industry. As an inventor, his primary focus was the development of matchplate molding and mold handling processes designed to automate, improve, and transform or eliminate the foundry industry’s most backbreaking tasks. As such, our company has been privileged to hold more than 150 patents around the world.

As an entrepreneur, his vision in naming the company “Hunter Automated Machinery Corporation” also reflected the potential he saw to create forward-thinking solutions for other industries. Today, as we look at back our 50-year history and ahead to what our legacy of innovation brings to the global foundry market, renaming the company “Hunter Foundry Machinery Corporation” in 2013 was a reflection of our single-industry focus...past, present, and future.

On the new product front, our HLM Series next-generation, linear motion matchplate molding machines have already begun to improve performance and maximize productivity for Hunter customers. Additionally, our full line of mold handling equipment continues to complement both our new and current molding machines, and those of other manufacturers. around the world

So please contact us at any time, to learn more about how we can help your foundry achieve its maximum productivity and profitability goals. And, again, welcome to our website. We hope you will explore it, and discover all there is to learn about our company, its products, and its services.

Sincerely,

A handwritten signature in black ink, reading "W.G. Hunter".

William G. Hunter
President and CEO
