

**“ALL YOU NEED IS HUNTER.”**

The fact that we opened our doors the same year that The Beatles hit America is pure coincidence, and it takes much more than that to succeed in the foundry industry. It takes innovation, diligence, service and support. That’s how we’ve built our reputation, and why our customers count on us to provide them with the latest technologies, the best service in the industry, and original replacement parts. That’s what we call The Hunter Advantage, and it’s why more foundries use Hunter than any other matchplate molding and mold handling machinery in the world.

**HIGHER QUALITY**

**+ LESS MAINTENANCE**

**+ MORE MOLD PRODUCTION**

**= HLM**

Our HLM Series linear-motion matchplate molding machines offer smoother, quieter, more energy-efficient operation with lower maintenance requirements. That adds up to increased mold quality, productivity and profit potential.

To find out if our HLM is the answer to your matchplate molding needs, call 847-397-5110, visit <http://www.hunterfoundry.com/node/102> or scan.

**HOWEVER YOU MAKE YOUR MOLDS, HUNTER CAN HANDLE THEM.**

Hunter’s full line of turntable and linear mold handling machines are used with all types of molding machines, regardless of the manufacturer. So even if you’re not using a Hunter molding machine, chances are we’ve got the mold handling solution that’s right for you. Since its founding in 1964, the mission of Hunter Foundry Machinery Corporation has been to develop the most innovative solutions possible for the automation of green sand matchplate molding and mold handling processes throughout the foundry industry.

## A History of Innovation

In 1963, Al Hunter had an idea for a new type of automated green sand molding machine and founded the company the following year. Hunter's machines have evolved the foundry industry during the last 50 years with many refinements and technological improvements. And while common wisdom suggests that "Pioneers get the arrows, settlers get the land," Al Hunter revolutionized an industry by pioneering the adaptation of automated machinery that changed the foundry world. Those who knew him will tell you: Al never "settled" for anything less than design integrity, ingenuity and simplicity. Hunter employees have carried his worthy legacy and tradition from one generation to the next, at all levels throughout the company.

## Global Advantage

Hunter's single focus is and has always been the foundry industry. And, just as its inventions have earned nearly 150 patents around the world, its innovations have reached from 1964 into the 21st century. Today, with more than 1,800 molding machines and mold handling systems installed around the world, Hunter's sales and service reach extends from its manufacturing sites in North America, South America and China through its

offices in the U.S.A., Europe, Brazil, and China to every corner of the globe. Customer access to technical support, as well as the company's \$12 million parts inventory, serve to maintain each machine's original production capability.

## Industries Served

Spanning six decades, Hunter has produced a complete line of matchplate molding and handling machinery for foundries that serve nearly every industry and application in the world. They include...

- Aerospace
- Agricultural
- Architectural
- Automotive
- Aviation
- Construction
- Government
- Hardware
- Heavy Equipment
- Hydraulics
- Lighting
- Machinery
- Manufacturing
- Maritime
- Oil & Gas
- Telecommunications
- Transportation
- Utilities
- Wind Power

## Latest Products

The latest addition to Hunter's matchplate molding equipment line, the HLM Series design is based on a proprietary new concept in automated matchplate molding technology. Its combination and integration of magnetically coupled rodless cylinders with linear bearings (for movements of the squeeze platen, cope flask, sand measuring hopper and other components) are an industry first.

Where cam followers, wheels, tracks, rails and other mechanical components subject to wear and degradation have previously been used for these motion functions, the HLM's sealed linear bearings and rodless cylinders replace these older components to provide smoother, quieter and more energy-efficient operation.

This results in lowered maintenance requirements, greater machine stability and improved mold quality.

Additionally, Hunter's full line of turntable and linear mold handling machines are used in nearly every country where metal casting occurs throughout the world, with all types of molding machines, regardless of manufacturer.
